Lodz, 19-08-2020

Certificate of Analysis No K/308/01/2020

Subject of analysis: UV-C STERILON FLOW 72W with UVC17H1 lighting (2x36W)

Klient: Lena Lighting S.A

63-000 Środa Wlkp. ul. Kórnicka 52

The device for testing was delivered by the Customer: 07-08-2020

The tests began: 11-08-2020 The tests finished: 17-08-2020

Type of analysis	Method	Results	
Microbial parameters			
Testing of the level of air pollution during the operation of the lamp in a room of 25 m <sup>2</sup>	Own methodology using a microbiological air sampler MAS-100 ECO <sup>TM</sup> Instruction MAS-100 Eco <sup>TM</sup>	*[cfu/1 m <sup>3</sup> ]	Redukcja drobnoustrojów
- total viable count of microorganisms at time 0		884	-
- total viable count of microorganisms after 2 hours		225	$R_{2h} = 71,15\%$
- total viable count of microorganism after 6 hours		191	R <sub>6h</sub> = 78,45 %
- total viable count microorganisms after 20 hours		21	R <sub>20h</sub> = 97,62%

ZAKŁAD JAKOŚCI ZYWNOŚCI robial efficacy of air disinfection with UV-C STERILON FLOW 72W with tel. (42) 674 64 14, (42) 636 92 11, tel./fax. (42) 674 81 24 UVC17H11 lighting (2x36W)

## Aim and scope of the study

The aim of the study was to determine the effectiveness of air disinfection with UV-C STERILON FLOW 72W with UVC17H1 lighting (2x36W)

(Certificate of Analysis K/308/01/2020) on the basis of the total viable count of microorganisms and number of molds and yeasts examination using aspiration method after 2, 6 and 20 hours flow UVC lamp working in a room with an area of 25 m<sup>2</sup>.

## Experimental procedure

The studies were conducted in accordance with its own methodology developed at the Laboratory and the manufacturer's manual MAS-100 ECO<sup>TM</sup> (Microbiological Air Sampler) in a room with an area of 25 m<sup>2</sup>. Before turning on the lamp, the total viable count of microorganisms and the number of mold and yeast in the room air were examined (at 0 time). The flow UVC lamp was placed in the center of the room and the air pollution was measured 2 meters from the device after 2, 6 and 20 hours of operation. The tests were carried out using the aspiration method using the microbiological air sampler MAS-100 ECO<sup>TM</sup>. Each time the device was placed on a flat surface, at a height of about 90 cm from the floor, and took 1000 liters of air through a perforated plate. The air stream containing particles was directed to the PCA or YGC agar surface in a standard Petri dish. After completing the air sampling cycle, the Petri dishes were incubated at 30°C for 72h or 25°C for 5 days, then the colonies grown were counted and the number of microorganisms in 1 m<sup>3</sup> of air was determined, taking into account the correction of the Feller's statistical correction table.
